I have been an XM satellite radio subscriber for close to two months and am appalled to learn that there is a petition sponsored by the National Association of Broadcasters aimed at limiting the local traffic and weather content provided by XM. I chose XM due to the variety and diversity of programming options available on satellite radio that can no longer be found on other commercial radio stations. Plus, I highly value the up-to-date and detailed weather and traffic information provided on XM. The Midwest has been stricken with highly tumultuous weather in the past few weeks, resulting in flooding and dangerous road conditions. XM's traffic and weather services allowed me to safely navigate the roads in and around my area. Satellite radio subscribers have voted for quality and variety with our pocketbooks, and we deserve to receive the best service that our providers can offer us. Don't allow the NAB to stifle satellite radio content or our freedom. That is NOT the American way!
Thank you.
